Introduction

AI needs better access to data!

Healthcare Data in France

Nationwide statistics ?

- encourage collaboration
- ensure data coherence
- link with other fields
- protect security and privacy

Our Approach

- in-house algorithms
- P2P and adapters
- centralized and decentralized deduplication
- standardized data formats
- enable building novel standards
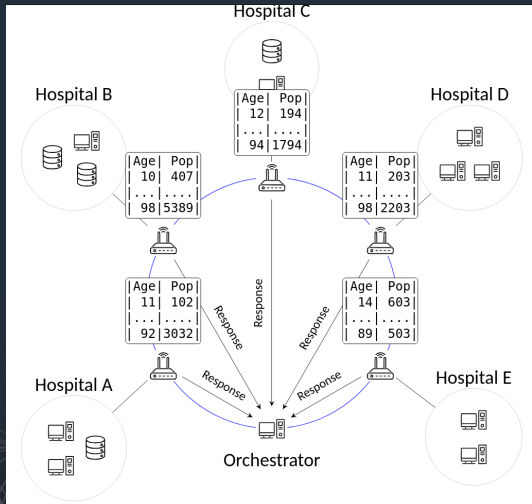

Example algorithm: histogram aggregation

Example network for a decentralized algorithm

# Example algorithm: histogram aggregation

Example algorithm: histogram aggregation

Example algorithm: histogram aggregation

Example algorithm: histogram aggregation

Our solution

Nebula

A **P2P cloud** infrastructure platform

for **building federations**

Our solution

Nebula enables:
- **massive interoperability**
- **secure data collaboration**
- **federated datasets**

Our solution

Demo time!

Reach and strong points

- no PII transit
- extensible in scope
- public-private partnerships
- sovereign system AND international collaboration
- facilitate data access
- CNIL-approved

Conclusion

Thanks for listening ! Any questions ?
